

The Federation of Bosnia and Herzegovina Government adopted the Work plan of the Federal Administration for Geodetic and Real Property Affairs

12.01.2021 14:32

The FBiH Government adopted the Work Plan of the Federal Administration for Geodetic and Real Property Affairs on their 250th regular session on 8 January 2021.

The Work Plan contains eight strategic goals and activities for the implementation. Harmonization between cadastral and land registry data within the Real Estate Registration Project will certainly be a priority activity.

From this year, the Federal Geodetic Administration will start with the public presentation of survey data much more intense and cadastral classification in municipalities that are not completed yet. Preparations

for this activity will be intensified and the process of public presentation will begin, and for that reason, the software application katastar.ba has been improved.

Considering that the Utility cadaster software application has been developed, it will also begin the development of the Utility cadaster database.

The Land consolidation activities will also be continued through current year, as well as finishing of the High Precision Level Network Project and preparations for development of the new ortho photo plans.

The special accent in the current year will be on development of the Spatial Data Infrastructure of Federation of BiH and the implementation of current projects; CILAP, Public services for real estate market and European integration/ phase II, Spatial Region project and Real Estate Registration Project for which from 17 December 2020 the implementation of the second phase officially began.
