

Training for real estate data collection operators

24.08.2020 21:03

Through the implementation of the pilot project of mass real estate appraisal activities within the CILAP project, it was planned to collect an extended set of data on real estate in the municipality of Novo Sarajevo, and create a database for later use of assessing the value of real estate. For this purpose was developed an application for the collection of real estate data and sent a public invitation to interested parties to apply for the positions of "Real Estate Data Collection Operator". The selection of candidates who will be temporarily engaged in the field collection of data on real estate in the cadastral municipality of Novo Sarajevo II, municipality of Novo Sarajevo was made after the public call.

The training about collecting data of real estate was held in premises of the Federal Administration for Geodetic and Real Property Affairs, where the operators explained the dynamic plan for the execution of the work on which they are engaged, planned data for collecting and the collection method, as well as the specific work in the application. Appropriate instructions for operators have also been prepared, which will serve as a guideline in their work. The beginning of data collection begins on August 24, 2020.
